

Sachin Rijal

Lalitpur, Nepal | +977 9765870064 | rijalsachin58@gmail.com | github.com/sachinrijal12 | sachin-topaz.vercel.app

Summary

Self-taught MERN stack developer and B.Sc. CSIT student building clean, functional web applications with React, Node.js, Express, and MongoDB. Comfortable across the full stack — from REST API and database design to responsive frontends and Vercel deployment — with a focus on performance, simplicity, and shipping working projects end-to-end.

Education

B.Sc. CSIT (Computer Science and Information Technology), Tribhuvan University Expected 2028

College Name, Lalitpur – currently in 4th semester

Relevant coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Object-Oriented Programming

Skills

Languages: JavaScript (ES6+), HTML, CSS

Frontend: React, responsive layouts, custom CSS (no-framework styling)

Backend: Node.js, Express.js, REST APIs, JWT authentication, WebSockets, EJS server-side rendering

Database: MongoDB, Mongoose

Tools: Git, GitHub, Docker, Linux, npm, Vercel

Projects

MERN Authentication System

[GitHub](#) | [Live](#)

- Built a full-stack authentication system with user registration, login, and JWT-protected routes using React, Express, and MongoDB
- Implemented bcrypt password hashing and cookie-based token handling across a separate client/server architecture
- Deployed the React client and REST API to Vercel with environment-based configuration for secrets and database credentials

Digital Tech House – Business Website

[GitHub](#) | [Live](#)

- Designed and shipped a responsive business website in React with 12 hand-built components: hero, services, portfolio, stats, and contact sections
- Styled the entire site with custom CSS (no UI framework), including a scroll-progress indicator and loading states
- Organized the codebase into reusable components, custom hooks, and centralized config and data modules
- Integrated a WhatsApp click-to-chat button for direct customer inquiries and deployed to Vercel

Food Recipes App (MERN)

[GitHub](#)

- Developed a recipe-sharing application with JWT-based user accounts and image uploads handled by Multer on an Express/MongoDB backend
- Persisted recipes and uploaded image references through Mongoose models with hashed user credentials (bcrypt)
- Structured the project as separate frontend and backend services communicating over RESTful endpoints

MERN CRUD – Record Management App

[GitHub](#) | [Live](#)

- Implemented complete create, read, update, and delete flows with dedicated React views backed by an Express/Mongoose REST API
- Deployed the app to Vercel with independent client and server codebases
